Ulrich Bremer examines the internationalization process of German public research universities, extracts multiple expected factors of impact from existing theory, tests them against data and thus delivers implications for research and practice. Strategy-based international partnerships, specialization and university size represent most relevant factors. The complex interplay of strategy and leadership are shown, a framework for their assessment is provided and conclusions in the fields of digitalization, uncontrolled migration and growing nationalism are drawn.

Civil society, NGOs, governments, and multilateral institutions all repeatedly call for improved or 'good' governance - yet they seem to speak past one another. Governance is in danger of losing all meaning precisely because it means many things to different people in varied locations This is especially true in sub-Saharan Africa. Here, the postcolony takes many forms, reflecting the imperial project with painful accuracy. Offering a set of multidisciplinary analyses of governance in different sectors (crisis management, water, food security, universities), in different locales across sub-Saharan Africa, and from different theoretical approaches (network to adversarial network governance); this volume

makes a useful addition to the growing debates on 'how to govern'. It steers away from offering a 'correct' definition of governance, or from promoting a particular position on postcoloniality. It gives no neat conclusion, but invites readers to draw their own conclusions based on these differing approaches to and analyses of governance in the postcolony. As a robust, critical assessment of power and accountability in the sub-Saharan context, *Governance and the Postcolony: Views from Africa* brings together topical case studies that will be a valuable resource for those working in the field of African international relations, public policy, public management and administration.

Examining-room computers require doctors to record detailed data about their patients, yet reduce the time clinicians can spend listening attentively to the very people they are trying to help. This book presents original essays by distinguished experts in their fields, addressing this critical problem and making an urgent case for reform, because while electronic technology has revolutionized the practice of medicine, it also poses a unique challenge to health care. Smartphones in the hands of doctors and nurses have become dangerously seductive devices that can endanger their patients. *Distracted Doctoring* is written for anesthesiologists and surgeons, as well as general practitioners, nurses, and health care administrators and students. once again, as it has during every major societal change over the past four centuries. The purpose of this new edition, published a turbulent decade after the first, is to provide institutional leaders -- from department chairs to trustees -- with a broad understanding of the academic enterprise, strategic guidance, and key principles, to assist them in navigating the future and drive the success of the institutions as they confront the unimagined. Recognizing that the hallmark of higher education in the U.S. is the diversity of institution types, each of which is affected differently by external and internal influences, the authors provide examples and ideas drawn from the spectrum of colleges and universities in the not-for-profit sector. This book covers the major functions and constituent departments and units within institutions; the stakeholders from students and faculty through the echelons of administration; the external environment of elected officials, foundations, philanthropists, and the new changing media; and innovations in teaching, technology, data analytics, legal frameworks, as well as economic, demographic, and political pressures. The book is informed by the proposition that adhering to four principles, that the authors identify as having enabled institutions of higher education to successfully navigate ever-changing and volatile pasts, will enable them to flourish in the coming decades: The four principles are: 1. Be mission centric by making all key decisions based on a core mission and set of values. 2. Be able to adapt to environmental change in alignment with the mission and core values. 3. Be committed to democratic ideals by seeking to promote them and modeling democratic

In the music classroom, instructors who hope to receive aid are required to provide data on their classroom programs. Due to the lack of reliable, valid large-scale assessments of student achievement in music, however, music educators in schools that accept funds face a considerable challenge in finding a way to measure student learning in their classrooms. From Australia to Taiwan to the Netherlands, music teachers experience similar struggles in the quest for a definitive assessment resource that can be used by both music educators and researchers. In this two-volume Handbook, contributors from across the globe come together to provide an authority on the assessment, measurement, and evaluation of student learning in music. The Handbook's first volume emphasizes international and theoretical perspectives on music education assessment in the major world regions. This volume also looks at technical aspects of measurement in music, and outlines situations where theoretical foundations can be applied to the development of tests in music. The Handbook's second volume offers a series of practical and US-focused approaches to music education assessment. Chapters address assessment in different types of US classrooms; how to assess specific skills or requirements; and how assessment can be used in tertiary and music teacher education classrooms. Together, both volumes of The Oxford Handbook of Assessment in Music Education pave the way forward for music educators and researchers in the field.
